

Week 1

Reflection : Program to perform simple arithmetic operations

Here in this program, to receive the input from the user we are using the prompt sync. Then after we prepared the menu so that the user can view what the options are and what is its limit (i.e 1-4). Likewise, since we had to perform as per the users' choice we let the user decide which operation the user wants to perform. For this we are using switch so that our program can run only the operation that the user wants excluding the other unnecessary operations. We have added some restrictions as well with the if else statement as if the user enters the number less than 0 or more than 5 the program will end with a message "invalid choice". Furthermore , we have written the code for the arithmetic operations and as we can see in the terminal after running the code ,the user has chosen option 3 which is multiplication and entered the number 12 and 3 as the first and the second number and has gotten the desired output that is 36.

The screenshot displays a Visual Studio Code (VS Code) environment. The Explorer sidebar on the left shows a project structure with folders 'Cn5006-main' and 'node_modules', and files 'package-lock.json', 'package.json', and 'portfolio.js'. The main editor window shows the 'portfolio.js' file with the following code:

```
1 //program to perform simple maths
2 const prompt = require('prompt-sync')();
3
4
5 console.log("1.addition");
6 console.log("2.subtraction");
7 console.log("3.multiplication");
8 console.log("4. division \n");
9 const opt = parseInt(prompt("Choose the operation from 1 to 4 "));
10 if(opt < 1 || opt > 4)
11 {
12     console.log("Invalid choice");
13 }
14 else
15 {
```

The Terminal panel at the bottom shows the command prompt output:

```
+ FullyQualifiedErrorId : CommandNotFoundException
PS C:\Users\soyab\Downloads\Cn5006-main\Cn5006-main> npm.cmd install prompt-sync
up to date, audited 4 packages in 770ms
found 0 vulnerabilities
PS C:\Users\soyab\Downloads\Cn5006-main\Cn5006-main> node portfolio.js
1.addition
2.subtraction
3.multiplication
4. division

Choose the operation from 1 to 4 3
Enter the first number 12
Enter the second number 3
The product is 36
PS C:\Users\soyab\Downloads\Cn5006-main\Cn5006-main>
```

The status bar at the bottom indicates the current file is 'portfolio.js' at line 9, column 63, with 2 spaces and UTF-8 encoding. The system tray at the very bottom shows the date and time as 12:17 PM on 10/2/2026.
